5. Q&A

WHY MEASURE SOCIAL PROGRESS?

Common assumption that economic development automatically generates social progress

Economic development does not always result in social progress

Social progress may also affect economic development

To understand inclusive growth, we need to **measure social progress directly** as a complement to standard economic measures

WHAT IS THE SOCIAL PROGRESS INDEX?

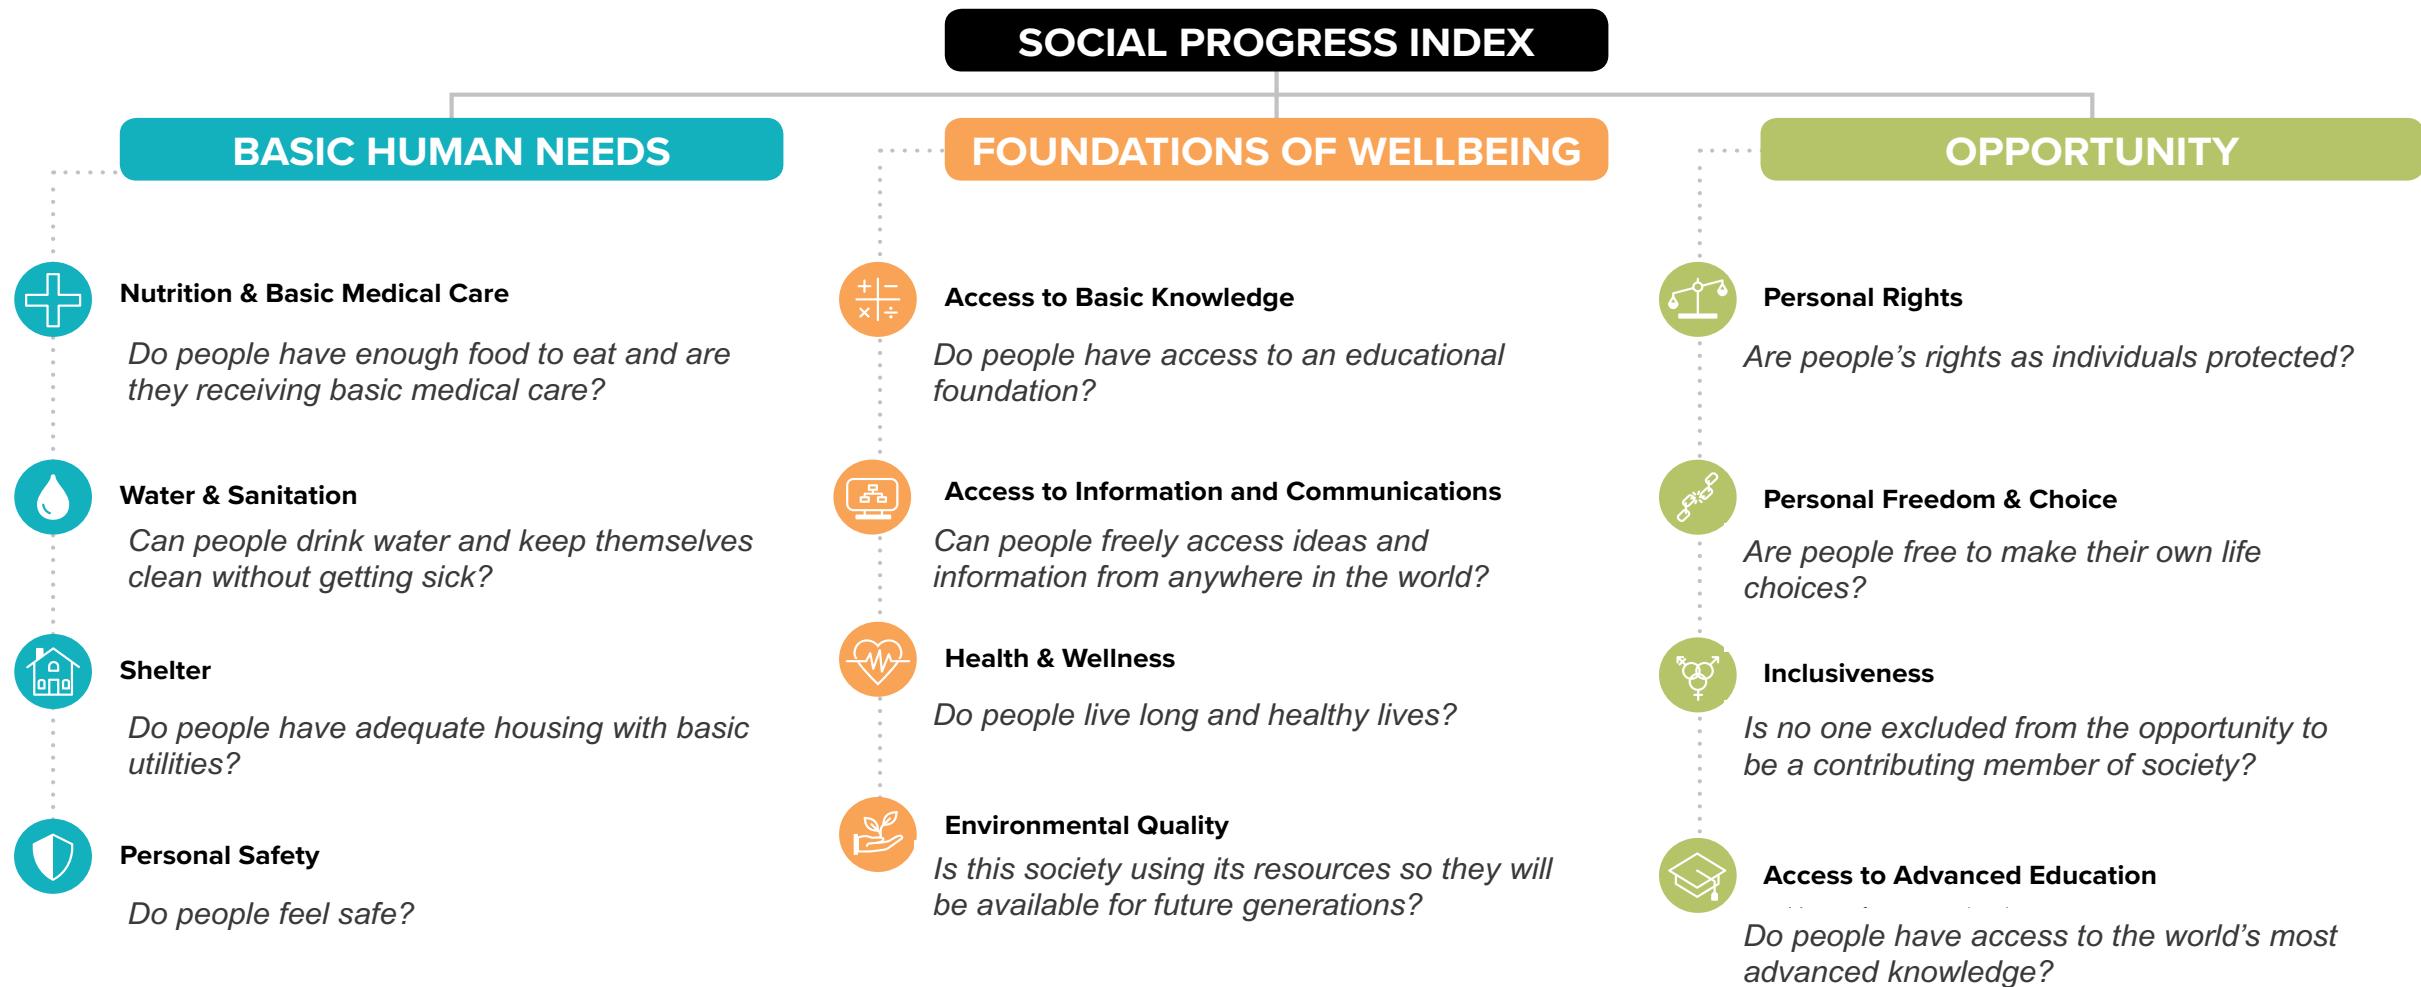

GDP + SPI = INCLUSIVE GROWTH

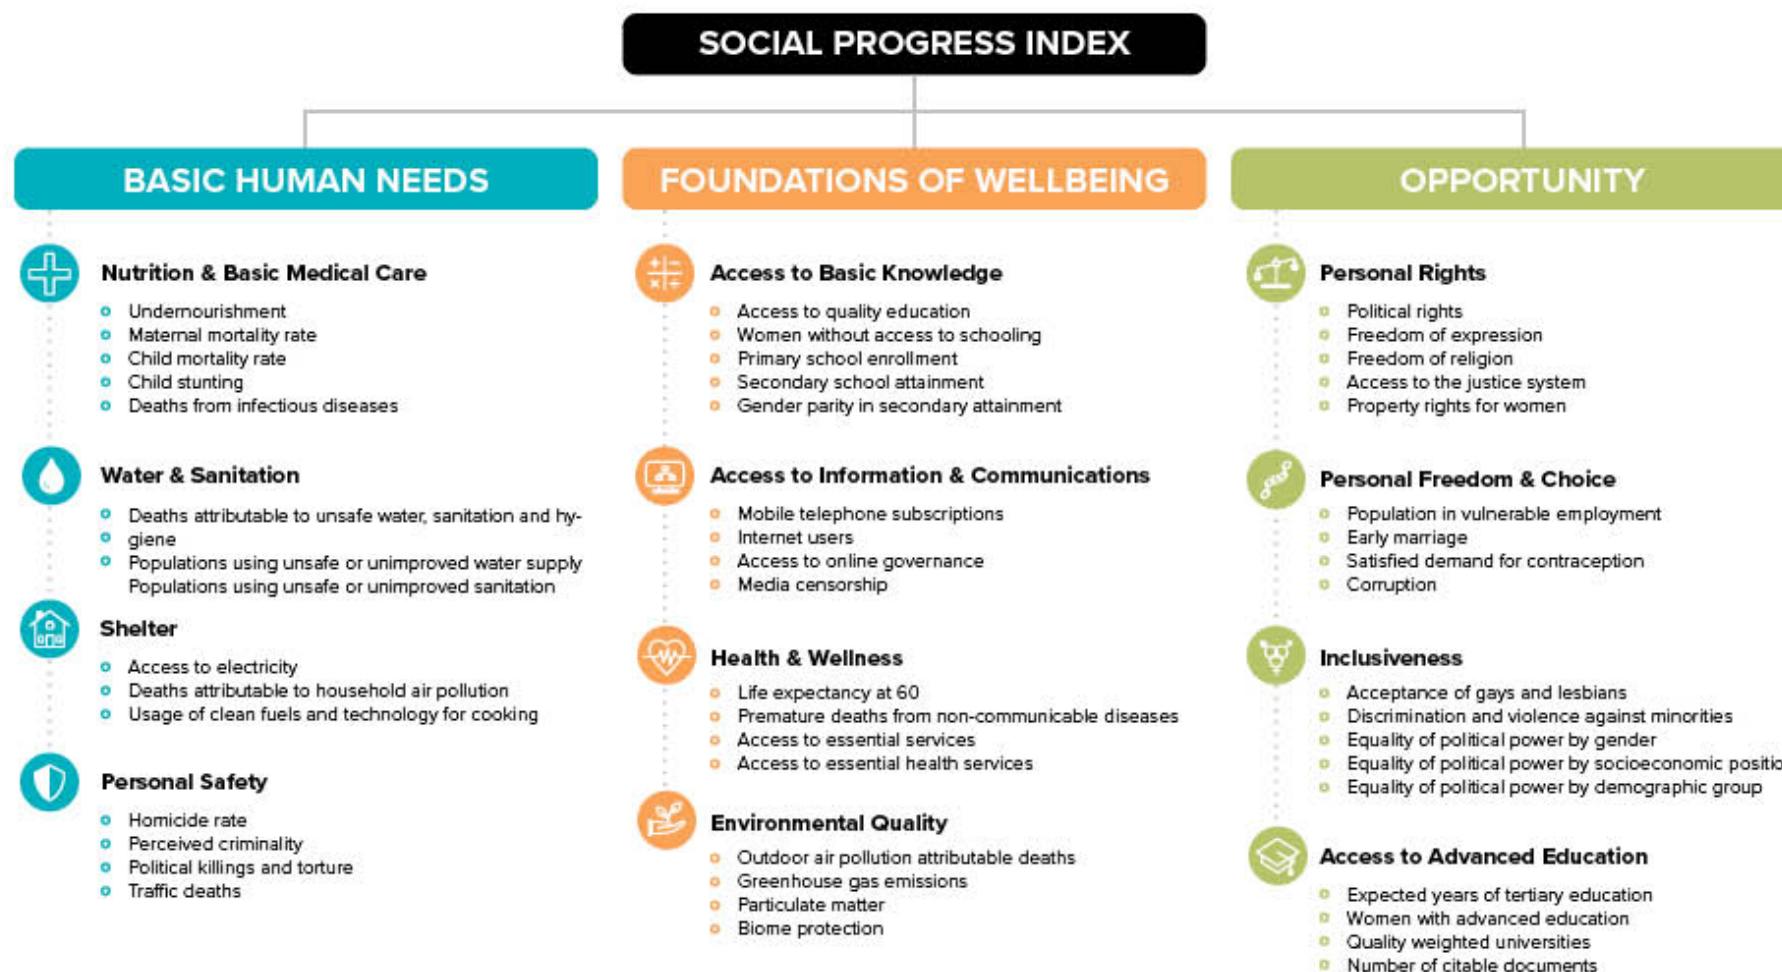

Social Progress Index design principles

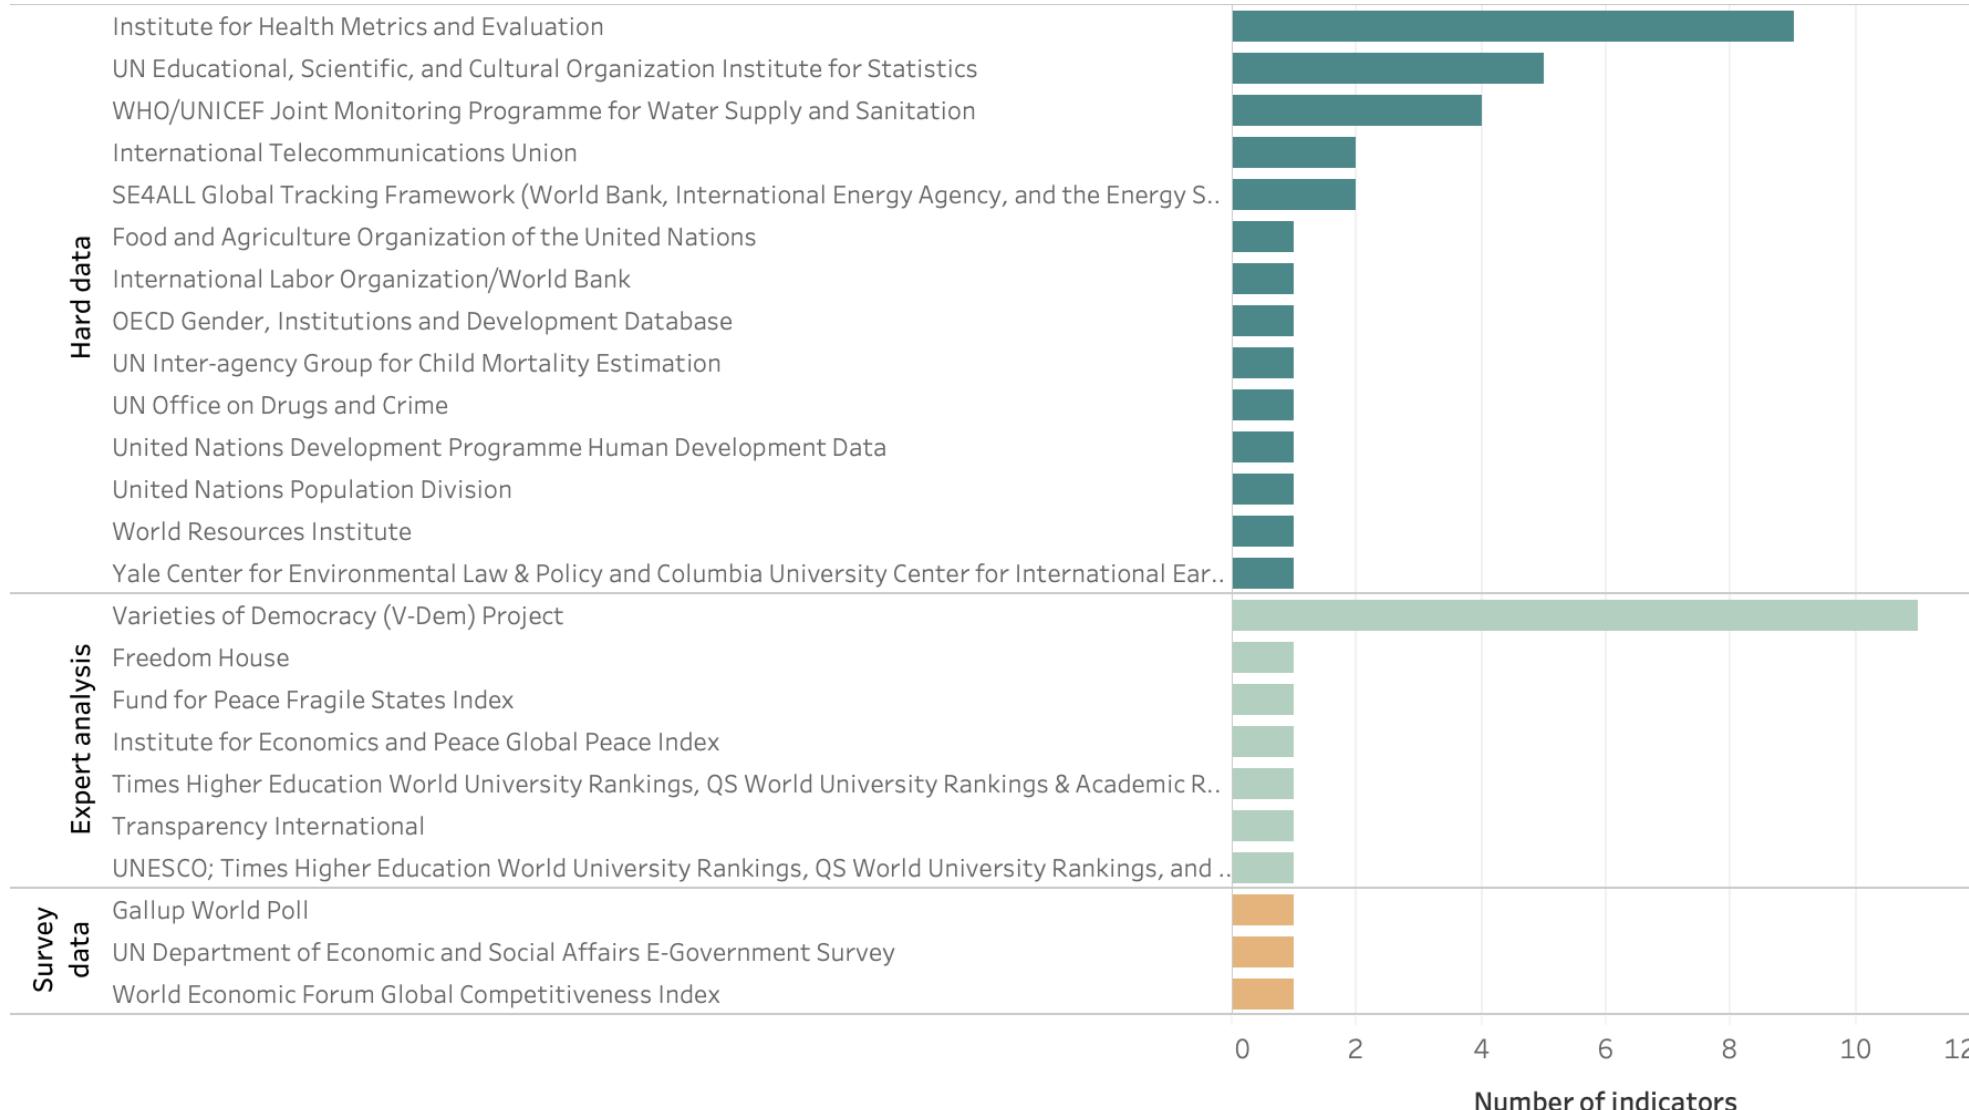

The Social Progress Index asks universally important questions about the success of our societies

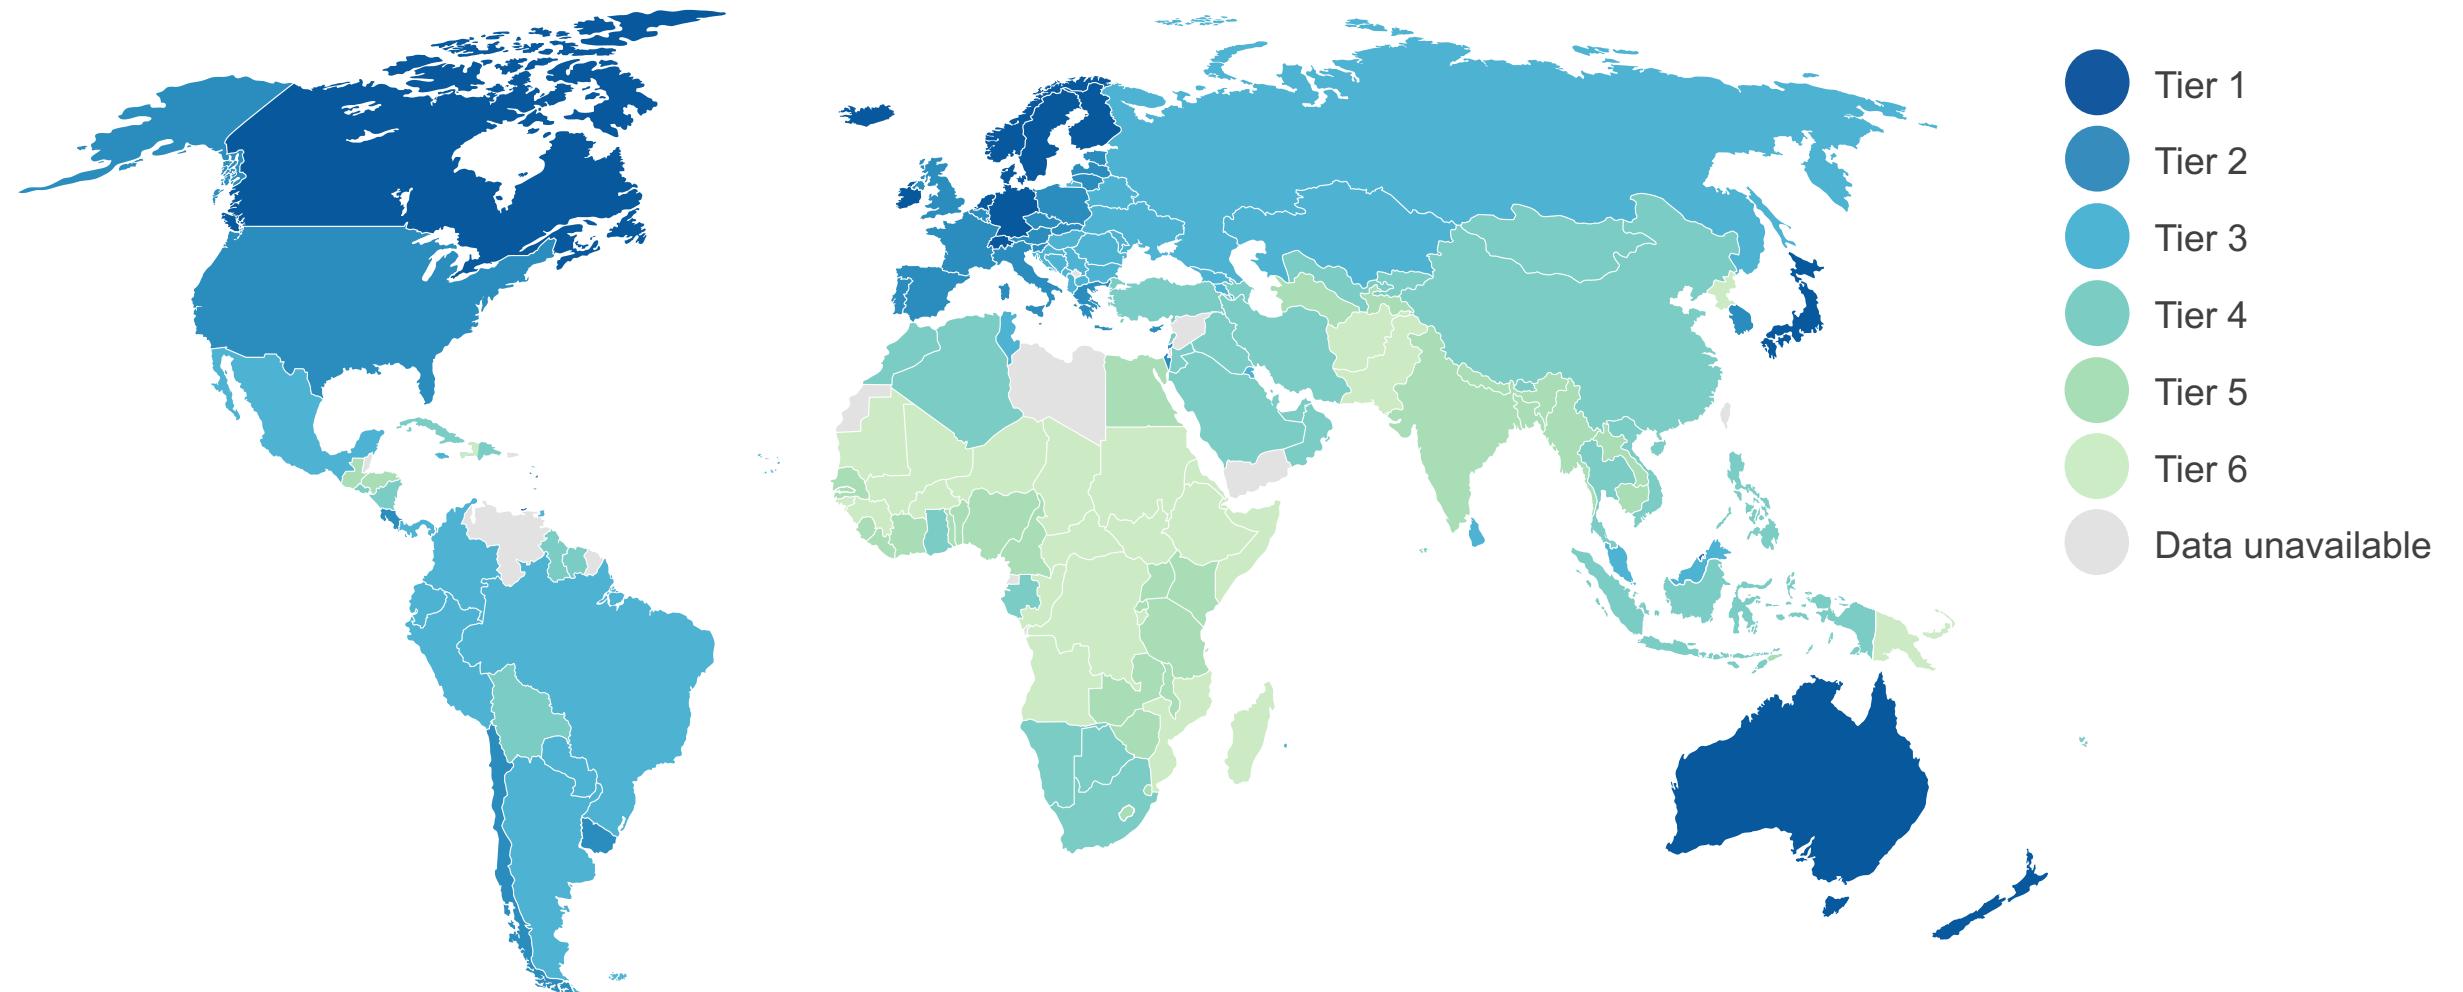

THE 2020 SOCIAL PROGRESS INDEX AGGREGATES 50 SOCIAL AND ENVIRONMENTAL OUTCOME INDICATORS FROM 163 COUNTRIES

Indicator data are drawn from multilateral organizations, think tanks, and research institutes

2020 SOCIAL PROGRESS INDEX RESULTS

ON AVERAGE, THE WORLD IS IMPROVING...BUT PROGRESS IS SLOW AND UNEVEN

Since 2011, the population-weighted world average score has **improved by 3.61 points**.

Since 2011, **155 countries** (95% of those measured) have improved by one point or more. Three countries (2%) have declined. Of the 155 countries that improved, **69 countries (42%) have improved by five or more points**.

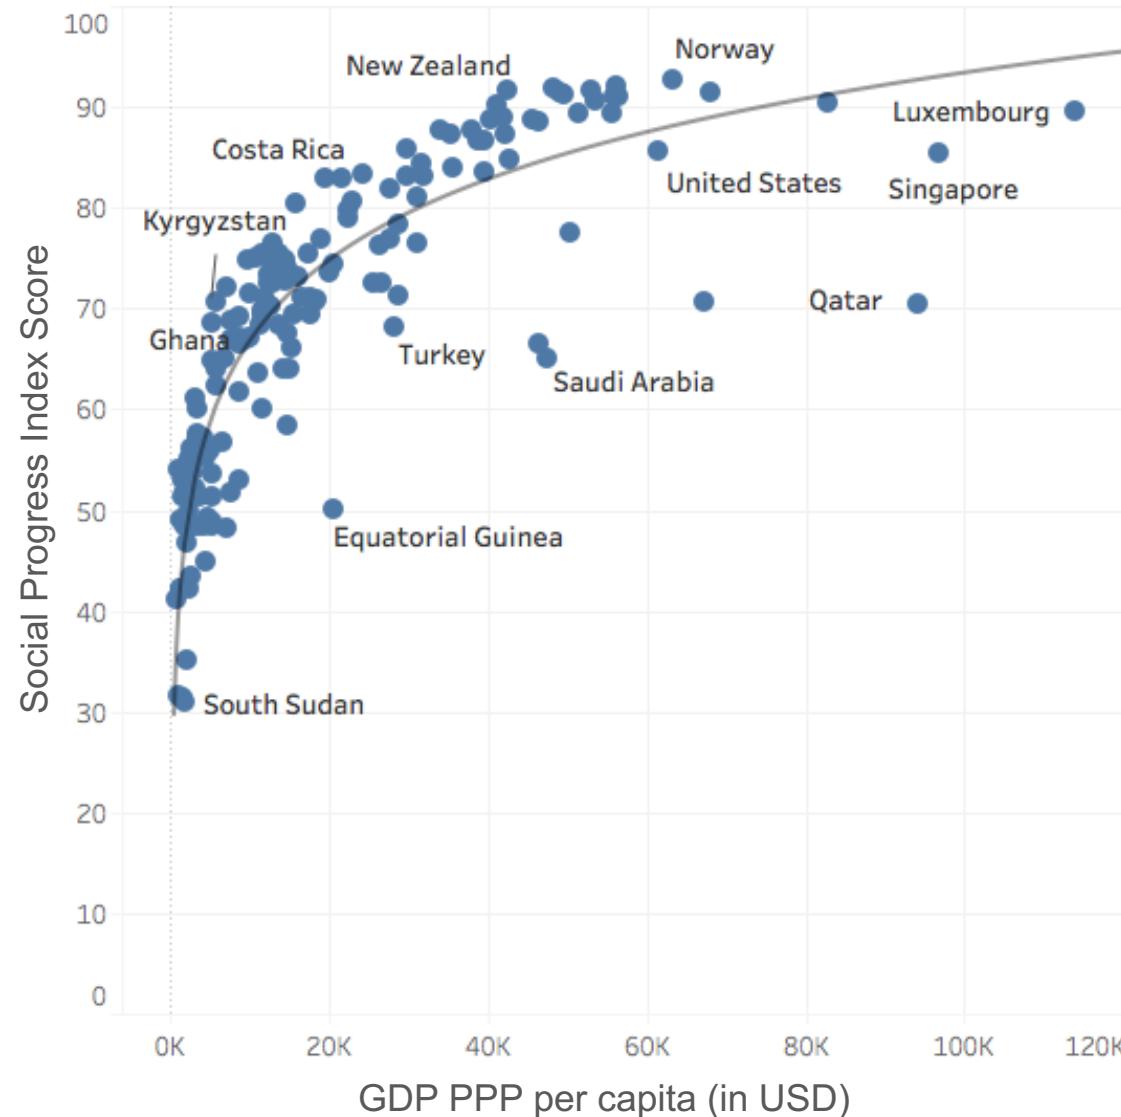

From 2011 to 2020 the world improved on 8 of 12 components

Since 2011, the world has improved most on **Access to Information and Communications, Access to Advanced Education, Shelter and Water and Sanitation.**

World progress has been uneven, with declines in **Personal Rights and Inclusiveness, and stagnation on Personal Safety and Environmental Quality.**

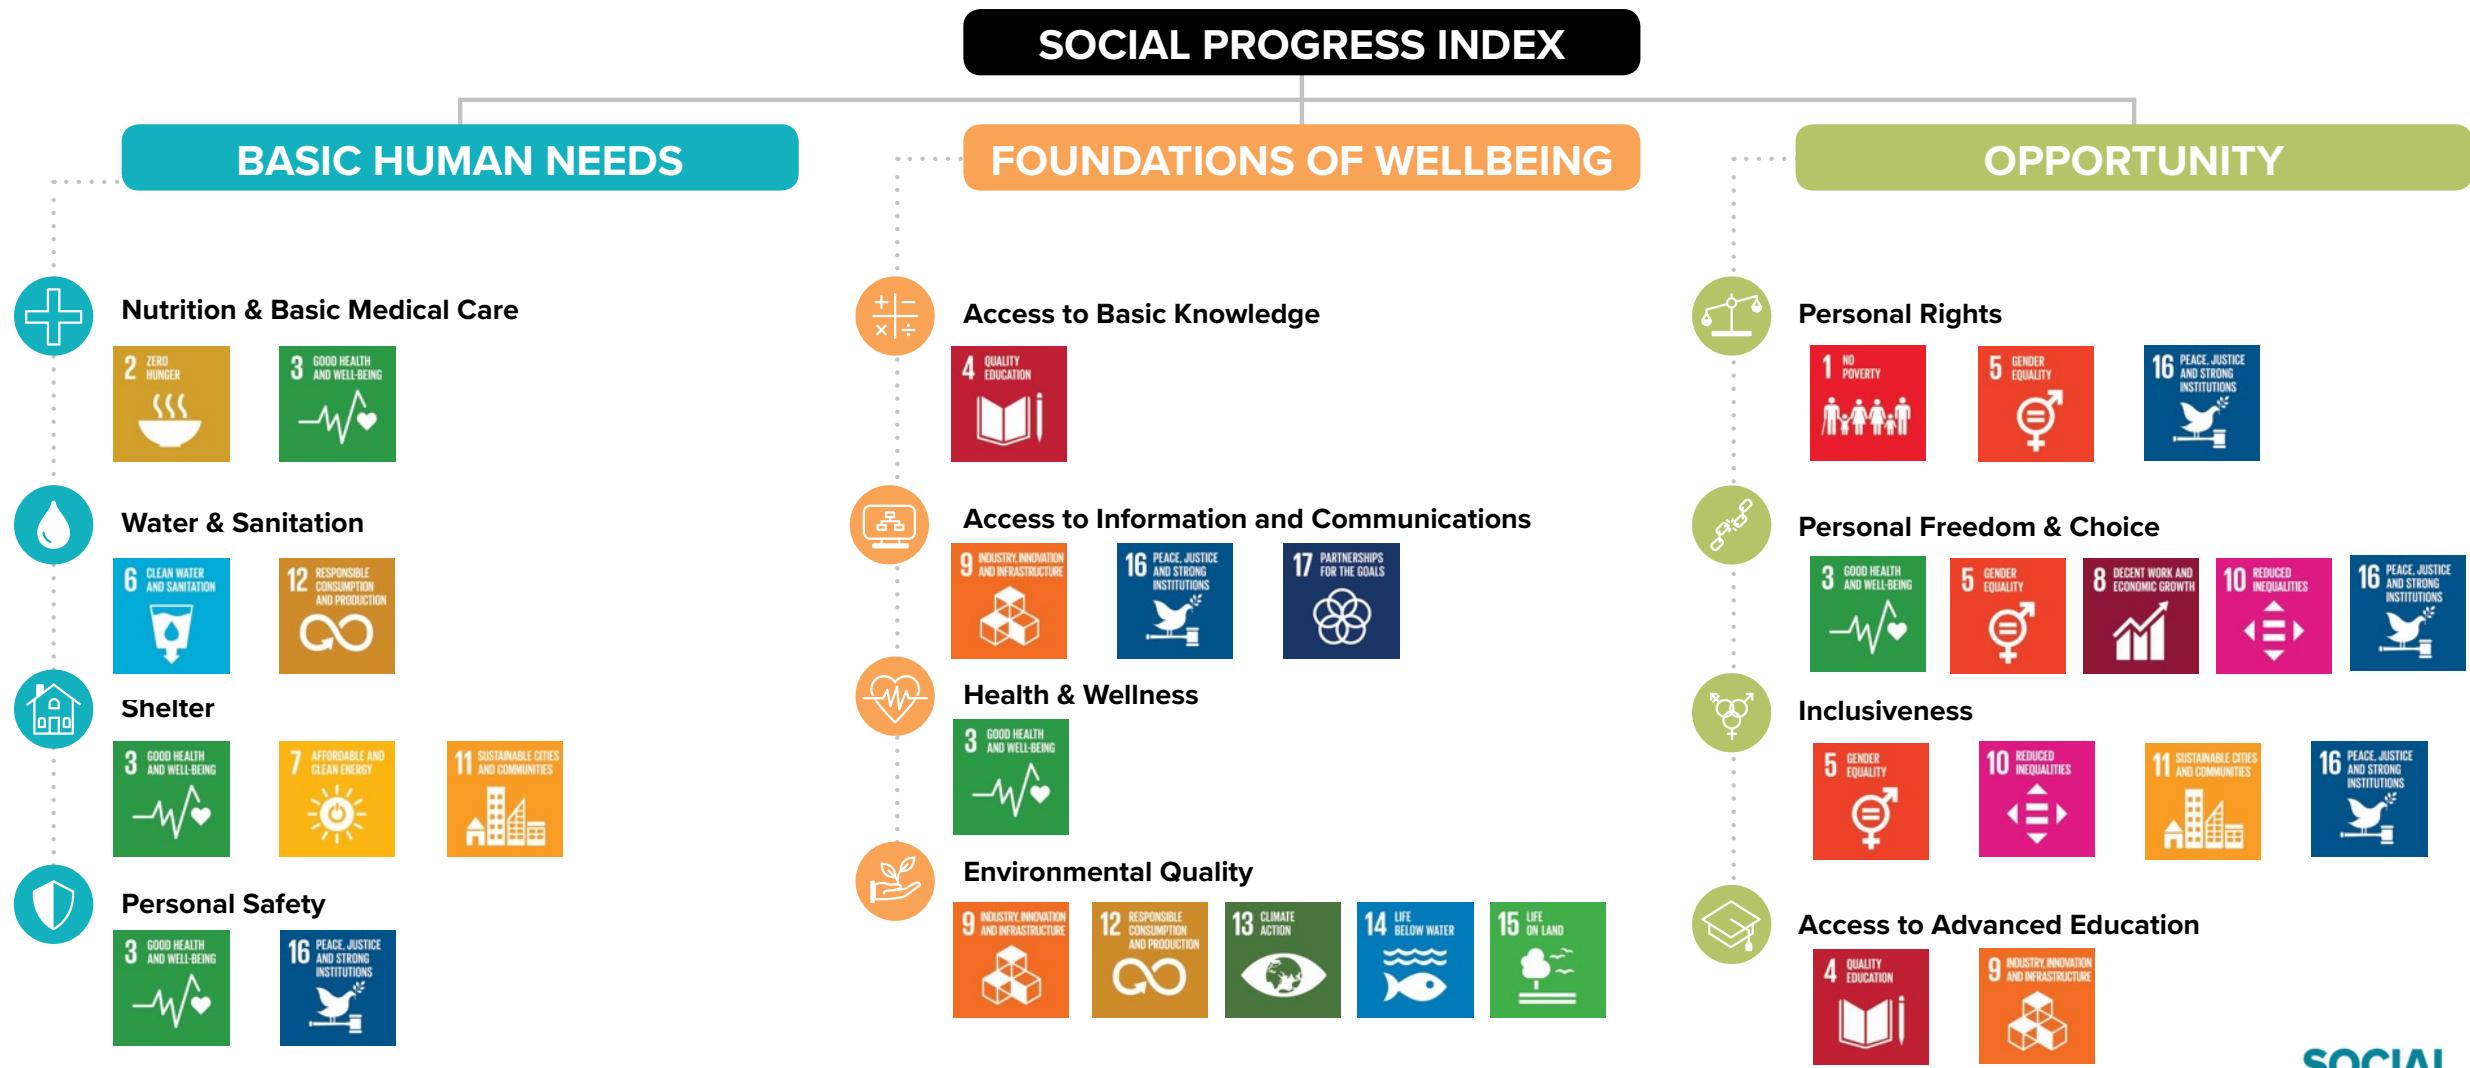

GDP is not destiny

Across the spectrum, we see how some countries are much better at **turning their economic growth into social progress** than others.

The Social Progress Index captures outcomes related to **all 17 Sustainable Development Goals** in a simple but rigorous framework designed for aggregation, making it an **invaluable proxy measure of SDG performance**.

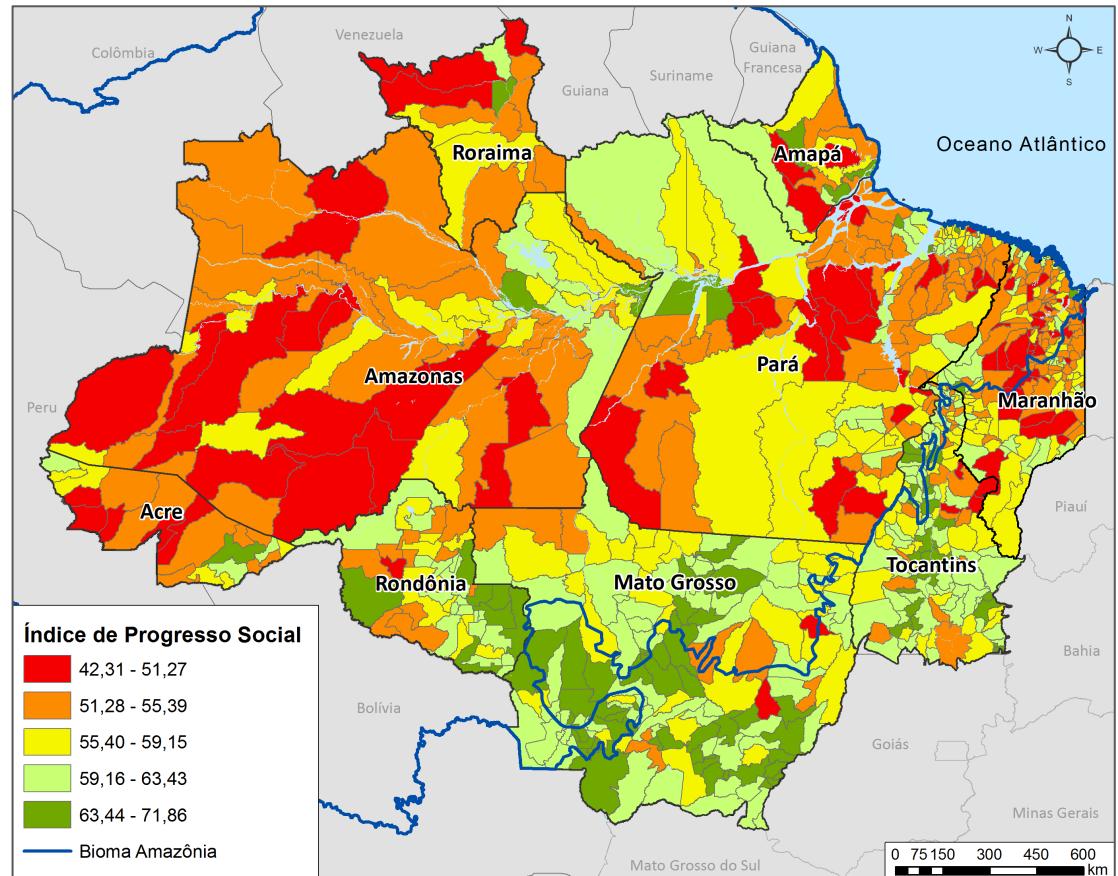

The Social Progress Index and the SDGs

1. The Social Progress Index

5. Q&A

Enabling progress in Brazil's Amazon

- The Amazon region became the **first** to test the application of Social Progress Index methodology on **sub-national level**.
- **772** municipalities in 9 states were included in the index, which is being used by the **state and municipal governments** as well as international organizations to inform their policies and prioritize investments.

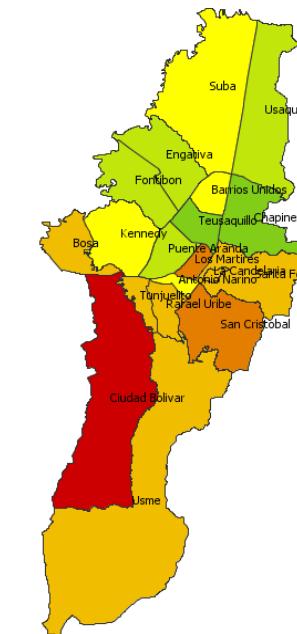

Enabling progress in Colombian cities

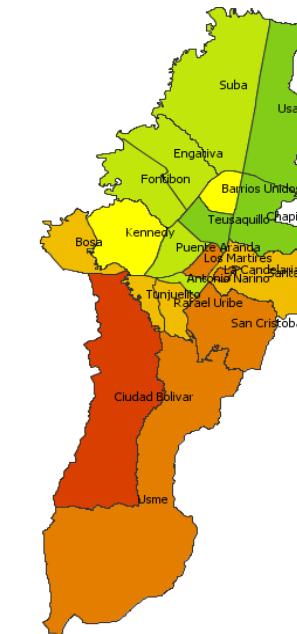

- Social progress tracked over a 5-year period in **13 major Colombian cities** and neighborhoods of Bogota provides a new perspective to guide urban and social **policies** and planning, improving social conditions for its citizens.

The EU Regional Social Progress Index

2020 EU Social Progress Index

The European Commission DG REGIO has developed its own **EU Regional SPI** for the 240 NUTS 2 regions of the EU, with its second edition launched in December 2020.

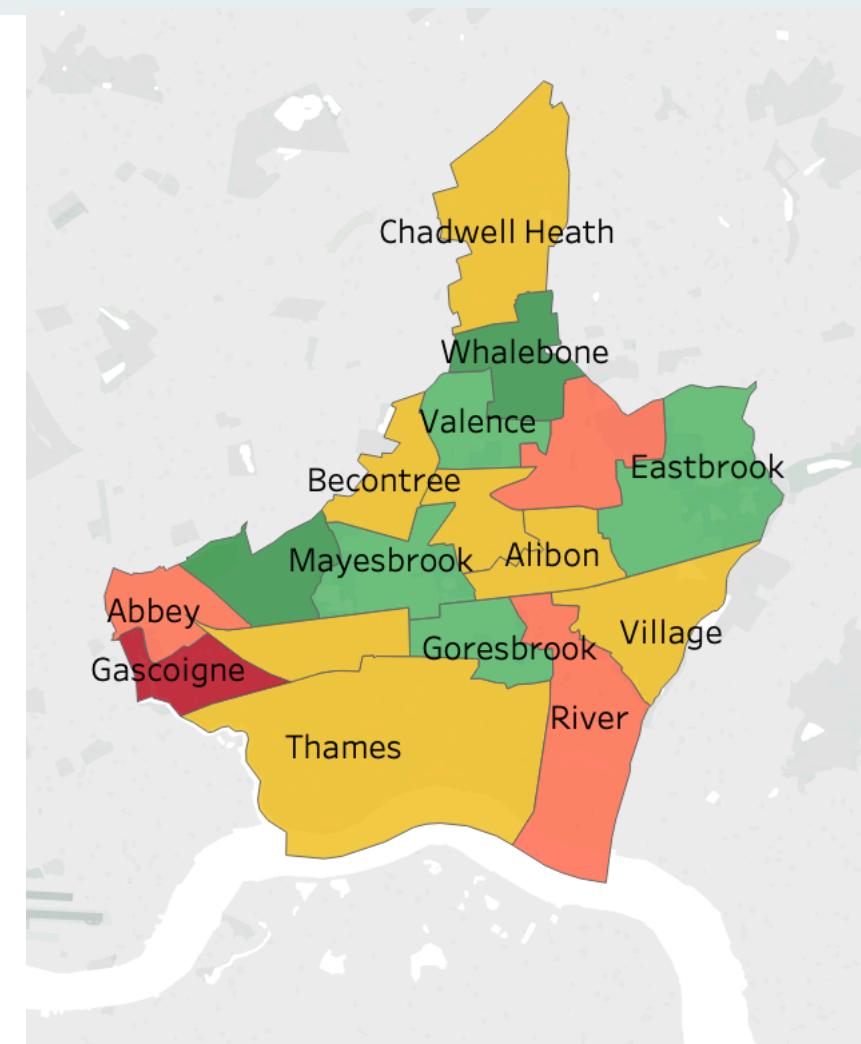

A pilot project was conducted in 10 EU regions. Regional stakeholders and public administrations across the EU referred to SPI as a very useful tool that provides **a common framework and language for all European regions** to measure social progress and prioritise social and environmental policies.

THE CASE OF BARKING AND DAGENHAM

ACTION AND IMPACT

- The London Borough of Barking and Dagenham has used a local ward-level Social Progress Index as a strategic tool since 2016.
- The SPI helped to effectively allocate resources and tackle issues such as domestic violence, homelessness, and fuel poverty.
- The Borough reports improved social outcomes and savings >£3m through preventive measures as a result.
- SPI is also used to ensure social value in public procurement.

Innovating around the Social Progress Framework

Last year, we released the Youth Progress Index, our first **disaggregated analysis** of quality of life for a specific demographic.

This **flexibility to innovate** and apply the index to measure progress in different contexts, for different groups, is one of the SPI model's great strengths.

The Youth Progress Index

Basic Human Needs

Nutrition and Basic Medical Care

- Undernourishment
- Depth of food deficit
- Maternal mortality rate
- Child mortality rate
- Deaths from infectious diseases

Water and Sanitation

- Access to piped water
- Rural access to improved water source
- Access to improved sanitation and facilities
- Youth satisfaction with water

Shelter

- Youth availability of affordable housing
- Access to electricity
- Quality of electricity supply
- Youth household air pollution deaths

Personal safety

- Homicide rate
- Level of violent crime
- Perceived criminality
- Political terror
- Youth traffic deaths
- Youth safe walking alone

Foundations of Wellbeing

Access to Basic Knowledge

- Youth literacy
- Primary school enrollment
- Gross school enrollment
- Gender parity in secondary enrollment
- Female population with some secondary education
- Male population with some secondary education

Access to Information and Communications

- Youth mobile telephones
- Youth internet users
- Press freedom

Health and Wellness

- Healthy life expectancy at birth
- Youth mortality from non-communicable diseases
- Youth suicide rate
- Death rate from HIV/AIDS

Environmental Quality

- Wastewater management
- Biodiversity and habitat
- Greenhouse gas emissions
- Youth air pollution attributable deaths
- Youth satisfaction with air quality

Opportunity

Personal Rights

- Political rights
- Freedom of expression
- Freedom of assembly/association
- Private property rights
- Youth confidence in police
- Percent of young members of parliament

Personal Freedom and Choice

- Youth freedom over life choices
- Freedom of religion
- Early marriage
- Satisfied demand for contraception
- Corruption
- Youth perception of corruption

Inclusion

- Youth openness towards immigrants
- Youth openness towards homosexuals
- Youth community safety net
- Discrimination and violence against minorities
- Religious tolerance
- Youth not in employment and not in education
- Youth employment gap

Access to Advanced Education

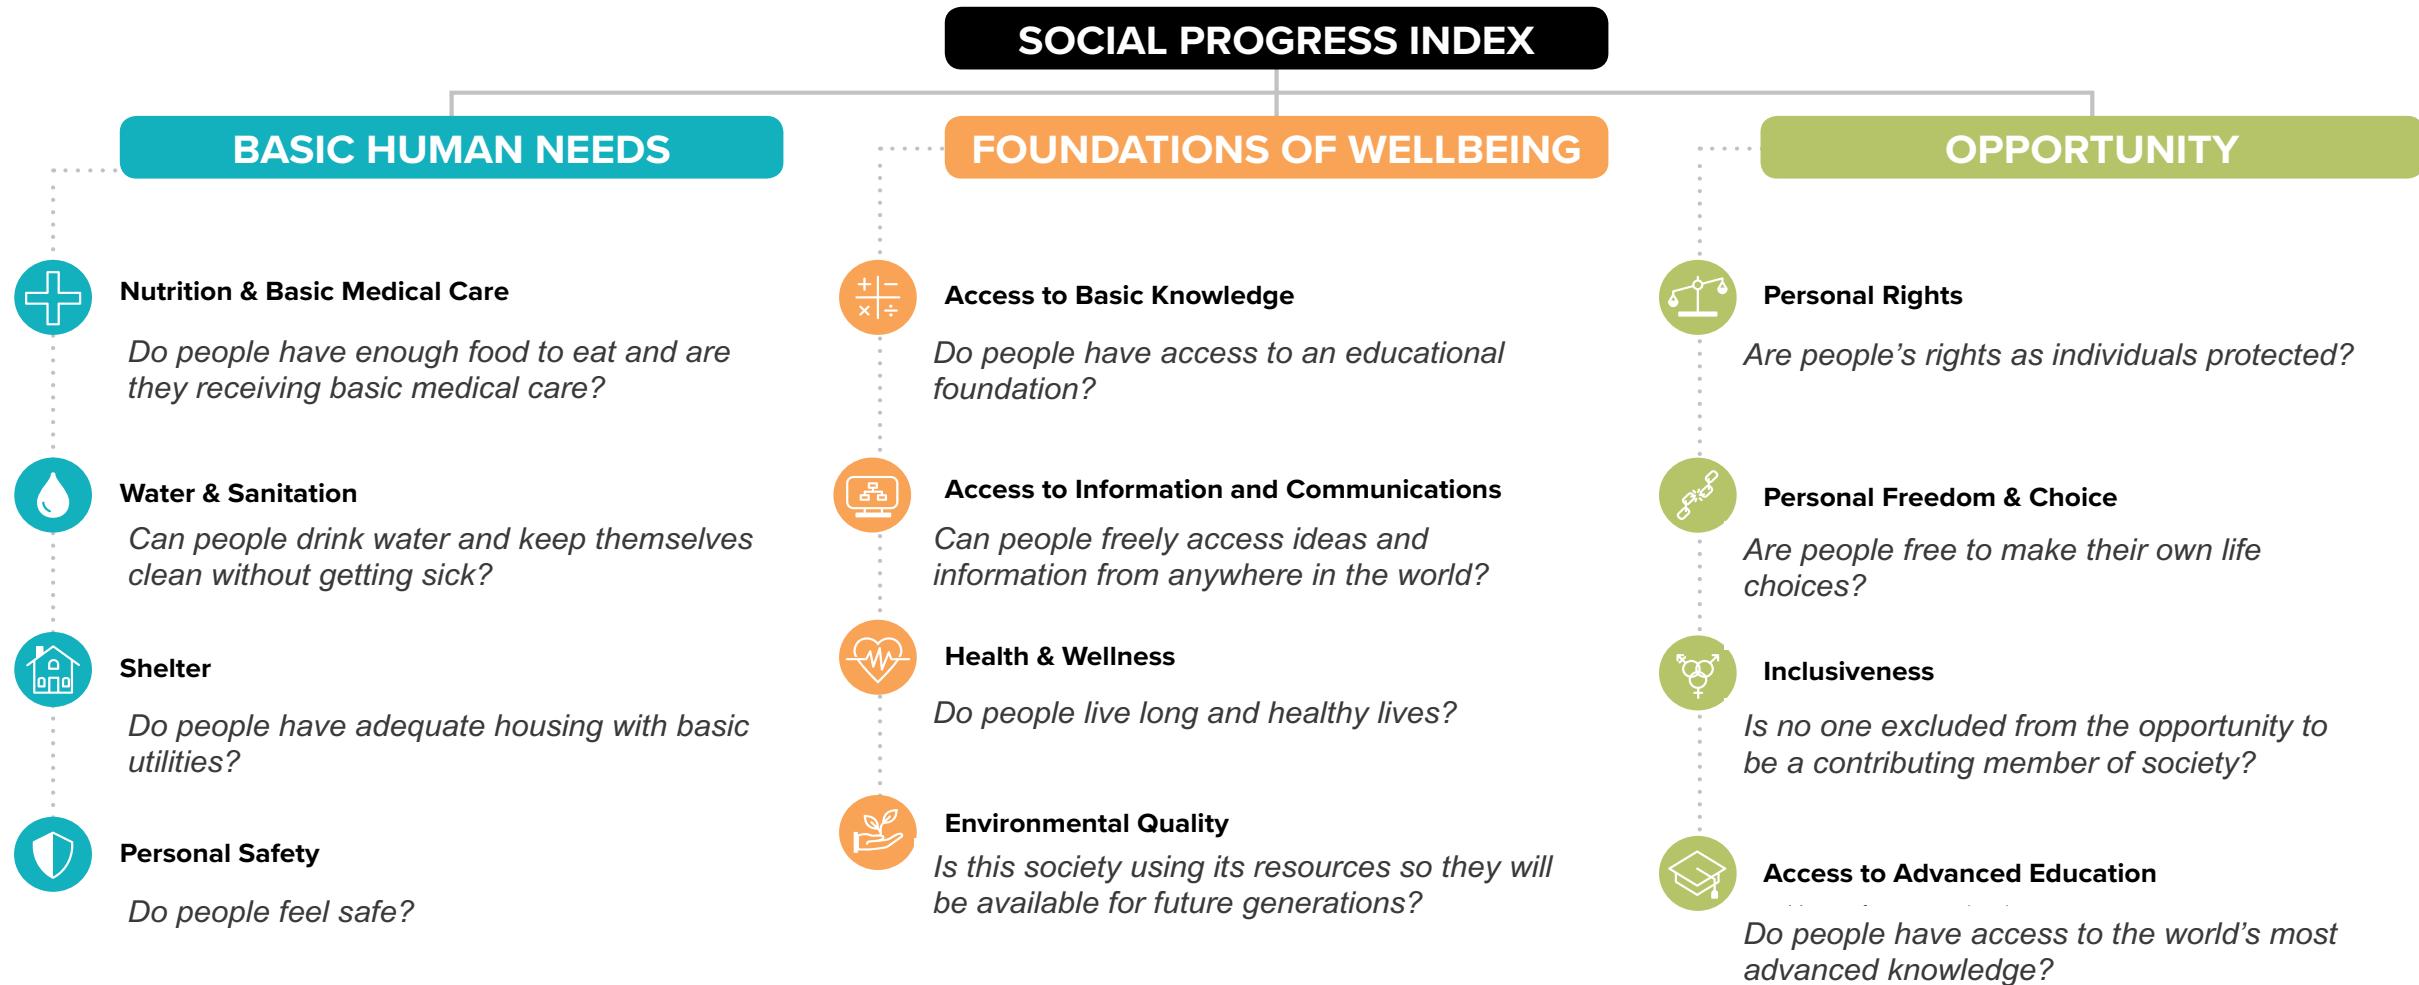

- Years of tertiary schooling
- Women's average years in school
- Inequality in attainment of education
- Tertiary enrollment rate

1. The Social Progress Index
2. Applications around the world
3. **Cursory look into SPI methodology**
4. The process of building a Social Progress Index
5. Q&A

Social Progress Index Framework

Basic Human Needs	Foundations of Wellbeing	Opportunity
Nutrition and Basic Medical Care	Access to Basic Knowledge	Personal Rights
Water and Sanitation	Access to Information and Communication	Personal Freedom and Choice
Shelter	Health and Wellness	Inclusiveness
Personal Safety	Environmental Quality	Access to Advanced Education

The Social Progress Index asks universally important questions about the success of our societies

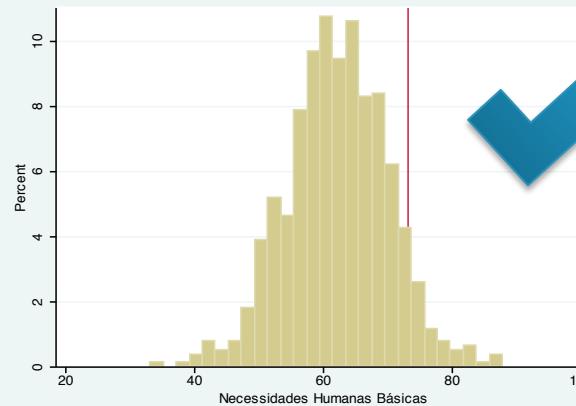

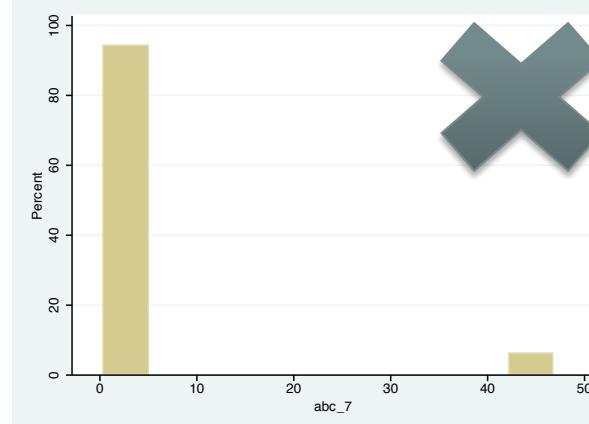

INDICATOR SELECTION CRITERIA

THE BEST AVAILABLE DATA – FOR THE BEST POSSIBLE MODEL

We need to look for some simple but essential **statistical characteristics**:

- ✓ Have more observation units than indicators. (>30)
- ✓ Have indicators with good distributions
- ✓ Avoid perfect correlations between indicators
- ✓ Look for outliers

PREPARATIONS BEFORE INDEX CALCULATIONS

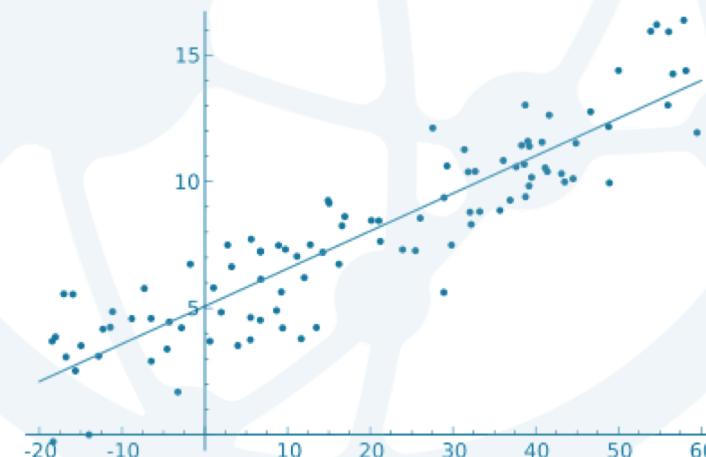

Imputation of missing data

Identify outliers

**Make scale adjustments and transform highly skewed indicators
(capping, bucketing)**

Invert indicators that are negatively related to Social Progress

Standardisation (z-scores)

UTOPIAS AND DYSTOPIAS

Before calculating the index, it is important to determine the values that would represent the absolute best case (**utopia**) and the absolute worst case (**dystopia**) for each indicator. In the dataset, two fictitious units should be created to represent all the best case scenarii and all the worst case scenarii.

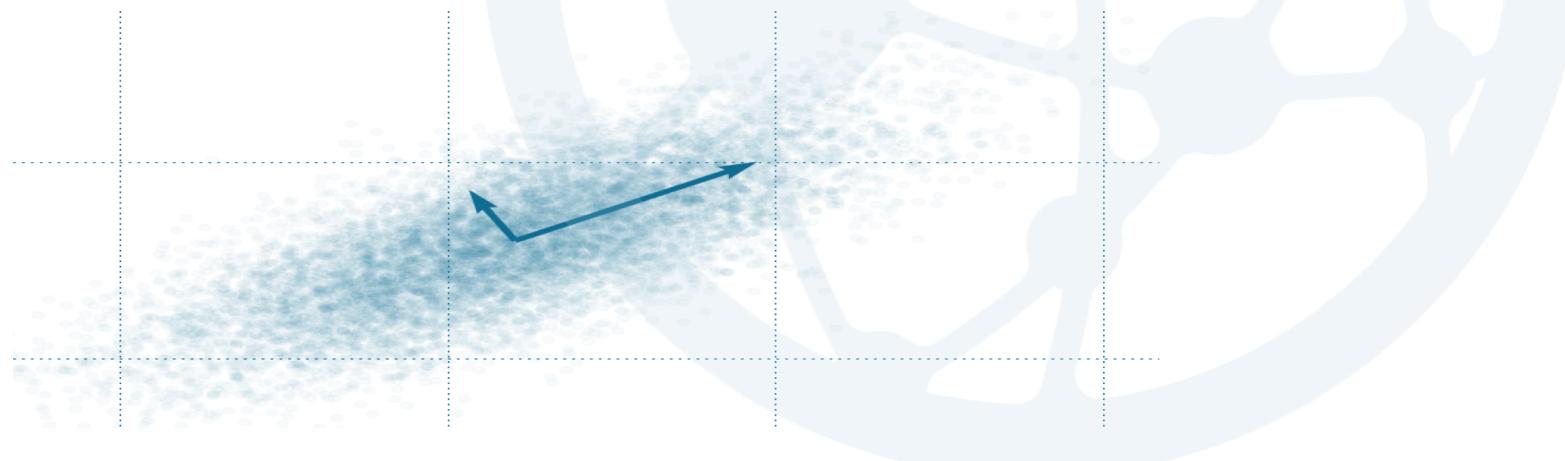

The utopia and dystopia values will be used to transform scores to the 0-100 scale, where 0 is the worst possible score and 100 is the best possible score (refer to “Calculating component, dimension and index scores”).

This makes the final scores more easily interpretable and comparable across components.

APPLYING THE PRINCIPAL COMPONENTS ANALYSIS

Principal Components Analysis (PCA) is used to evaluate the fit of indicators within components and determine indicator **weights** within components. If indicators are chosen well to reflect a component, this method help us to identify **robust and consistent** combinations of indicators for each component.

To create indexes with **variables that measure similar things** (conceptually). To get a small set of variables (preferably uncorrelated) from a large set of variables (most of which are correlated to each other)

WEIGHTING AND AGGREGATION

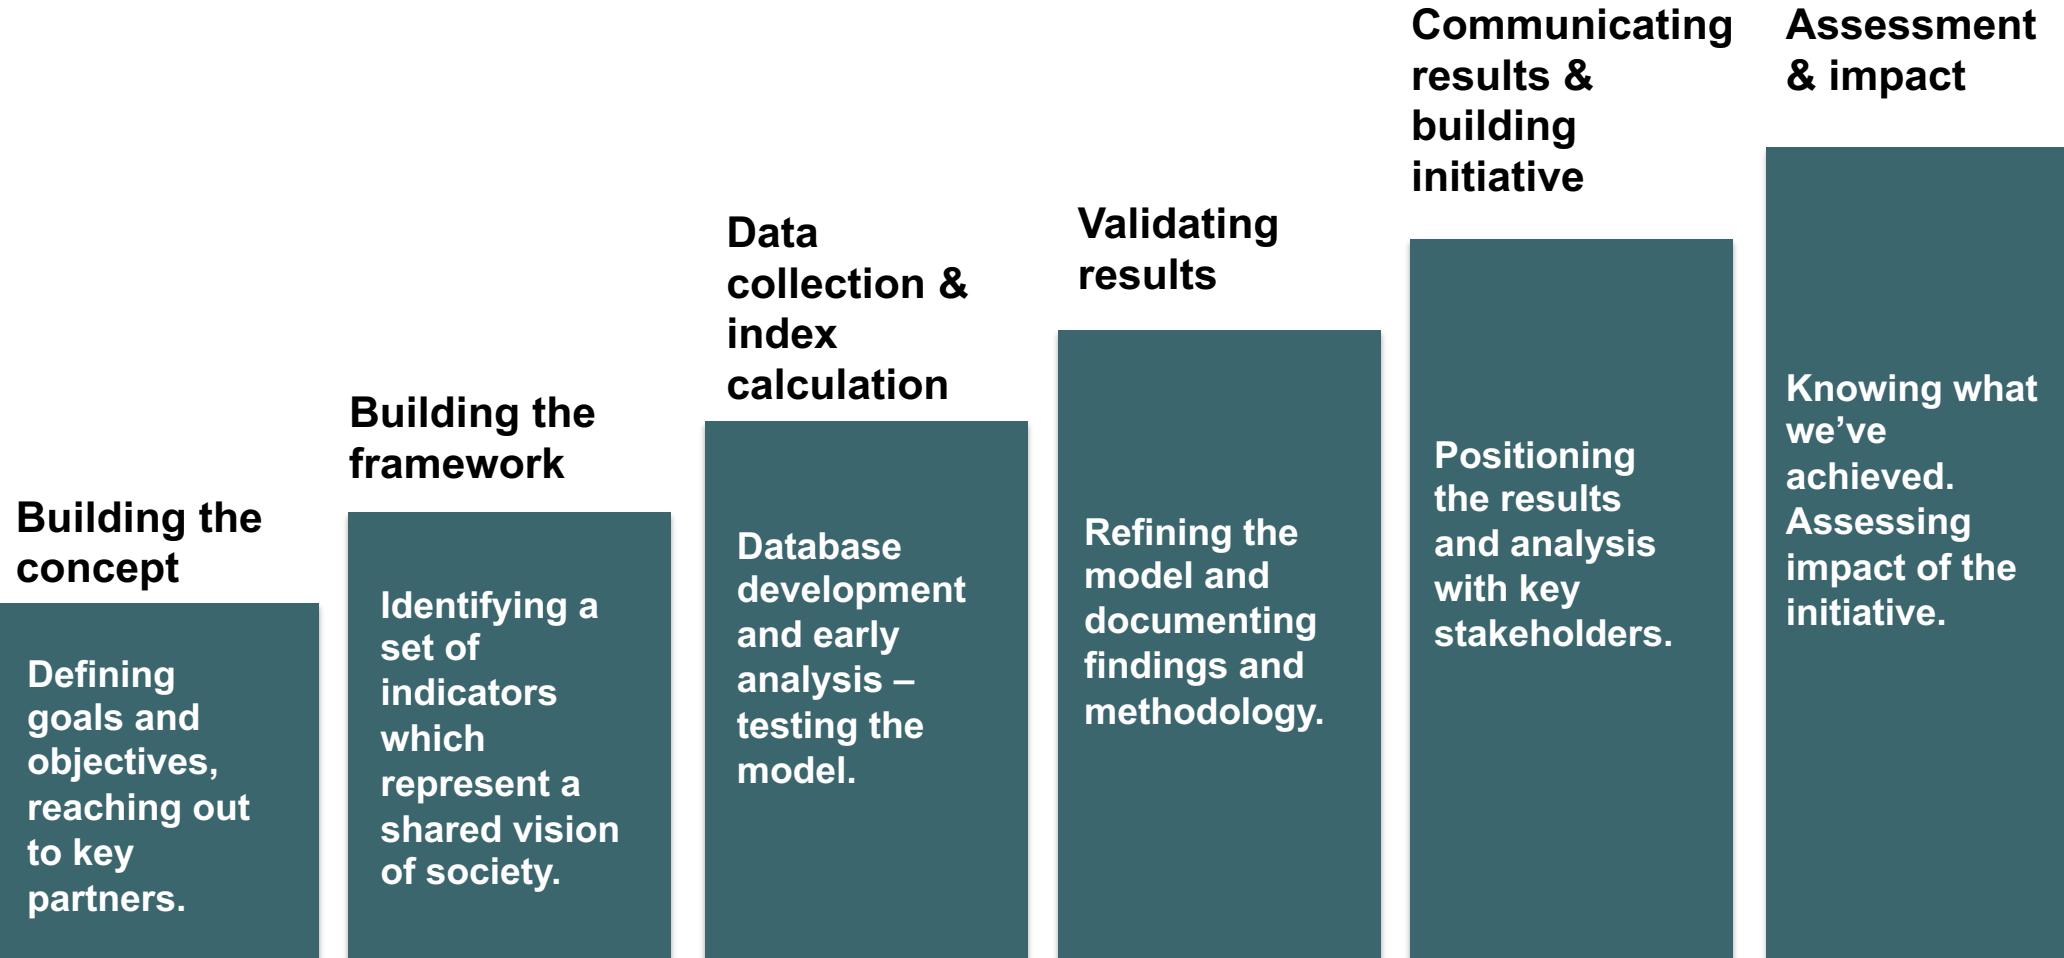

Each dimension is simply the average of the four components that make up that dimension; and the overall index is calculated as the simple average of the three dimensions.

$$\text{Dimension}_d = \frac{1}{4} \sum_c \text{Component}_c$$

$$SPI = \frac{1}{3} \sum_d \text{Dimension}_d$$
